Response to Amendment

This office action is responsive to Applicant's amendment received on Feb. 28, 2005. Claims 2-3, 31, 34-35, 53-54, 58, 69, 79, 97, and the Abstract are amended. Claims 1-120 remain pending.

Response to Arguments

Applicant's arguments with respect to claims 1-120 have been considered but are moot in view of the new ground(s) of rejection.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-28, 40-79, and 98-99, drawn to the subject matter wherein unauthorized access to information held in static memory elements is prevented, classified in class 713, subclass 193.
- II. Claims 29-39 and 111-120, drawn to the subject matter wherein a distributed short-term key is protected by a separate private long-term key, classified in class 380, subclass 281.
- III. Claims 80-97, drawn to the subject matter wherein a distributed key is protected by a public key algorithm, classified in class 380, subclass 285.
- IV. Claims 100-104, drawn to the subject matter wherein authorization to a digital processing system is dependent upon cryptographically processed data for personal verification, class 713, subclass 182.

- V. Claims 105-110, drawn to the subject matter wherein the transmission and reception entities exchange information during authentication, which establishes an operational key, class 713, subclass 171.

The inventions are distinct, each from the other because of the following reasons:

Inventions I through V are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because data may be stored and retrieved as plain text verses encrypted text. The subcombination has separate utility such as encrypted communications and messaging.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
